# Streamline, Automate & Secure File Transfers

A focused file transfer solution, Attunity MFT (formerly known as RMFT) allows organizations to architect efficient workflows and facilitate user-friendly interactions. As a secure communications platform, Attunity MFT offers key features such as authentication, file access authorization, encrypted transport, and comprehensive auditing over the file transfer process. As an automation solution, Attunity MFT allows organizations to schedule and execute end-to-end transfer processes with guaranteed delivery using standard and/or specialized protocols.

Business Benefits:

- Improve efficiency and reliability of information exchange
- Make file transfers more accessible to end users and business applications
- Maintain compliance and best-practices standards for data security

What drives the need to adopt Attunity Managed File Transfer?

- "Patchwork" Processes – Legacy scripts, disparate file transfer processes and multiple data hosts are difficult and costly to support. Attunity MFT alleviates these issues by providing a consistent, standards-based means for building, automating, and managing file transfer processes.

- Access and Management Concerns – End users seek an intuitive, self-managed solution that provides visibility into file delivery, while IT looks to manage this process as easily as possible. Attunity MFT reduces administration and enables business through policy-based Active Directory integration, ad-hoc user creation, and user-friendly Web and Desktop interfaces. Add-ins for Microsoft Office and Outlook are also available.

- Security Concerns – FTP, email, and other file transfer methods lack essential security and auditing capabilities, leaving your organization open to the misuse of proprietary information. Attunity MFT secures the file transfer process with full authentication and transfer auditing capabilities.

Attunity Managed File Transfer provides the security, scheduling, automation and auditing framework needed to effectively address enterprise user, server and application-driven file exchange.

Key Features:

- Consolidate file transfer processes under one managed solution
- User-friendly Web (HTTP/S) and Desktop clients
- Add-ins for MS Outlook
- Ad-hoc, policy-based user creation
- Web Services API for integration with business processes
- Support for FTP, FTPS, SFTP, SSH, HTTP/S, S/MIME, and SMB
- Enhanced FTPs for accelerated delivery
- Auditing and notification
- Multi-tiered security architecture with DMZ front end
- Extensive scheduling, automation, hot directory, and file processing capabilities
- Shared folders architecture for business collaboration
- Integration with SharePoint

"Attunity MFT enables us to meet HITECH standards for handling highly confidential healthcare information, while also accelerating our data collection processes. Our customers and partners absolutely love the simple, intuitive Web interface and the reliability that Attunity MFT provides."

Fred Levinsky, CEO
The St. Paul Group

"Attunity MFT saves us approximately 20 hours per month and it eliminates the need for employees to download files after business hours."

James Stock, AVP Network Services
