

Attunity Solutions for Amazon Web Services (AWS)

Attunity is an Advanced Technology Partner of Amazon Web Services (AWS) offering solutions that help you accelerate data replication, ingestion, and streaming across all major database, data warehouse, data lake and legacy platforms, on premises and in the Cloud. Used by hundreds of enterprises worldwide, Attunity solutions help you get more value from your data on the AWS Cloud easily, securely, and efficiently with zero downtime.

Attunity Solutions for AWS

Attunity Replicate is the foundation for modern, efficient data pipelines to AWS moving data at high speed from source to target through a simple graphical user interface that automates end-to-end replication. With agentless configuration, you can easily set up, control, and monitor bulk loads and real-time updates using Attunity's change data capture (CDC) technology.

ATTUNITY AND AWS - WORKING TOGETHER

Attunity technology is validated by Amazon Web Services (AWS) for Data Integration in the AWS Big Data Competency Program and for Data Migration in the AWS Migration Competency Program.

Attunity Compose automates the transformation of data into analytics-ready structures. For data warehouses, it automates the design and deployment of models in Amazon Redshift. Attunity Compose automatically generates the ETL code and supports both bulk and real-time movement with change data capture (CDC) that integrates with all major on-premises and cloud sources. For data lakes, Attunity Compose automates schema creation, data transformation and continuous data updates into ACID-compliance SQL Hive data stores.

FACTOIDS

- Attunity solutions have a 5-star rating on the AWS Marketplace
- Attunity technology has moved more data to the AWS Cloud than any other technology

CUSTOMER SUCCESS

- Fanatics leverages Attunity software to accelerate data ingestion from its heterogeneous on-premises data sources to a data lake in the AWS Cloud.

- Cardinal Health uses Attunity software to move data from SQL, Oracle, and other sources to Amazon S3, where they can consume the data in Kafka and perform analytics to identify new ways of improving services for their customers.

- Philips Healthcare used Attunity software to transform and transfer data sets as large as 35 million records to Amazon Redshift in just 90 minutes.

ATTUNITY SUPPORT FOR THE AWS PLATFORM AND PRODUCTS

Storage

- Amazon Simple Storage Service (Amazon S3)

Database

- Amazon Relational Database Service (Amazon RDS)
- Amazon Aurora

Data Warehouse

- Amazon Redshift

Analytics

- Amazon Elastic MapReduce (Amazon EMR)
- Amazon Kinesis

Compute

- Amazon Elastic Compute Cloud (Amazon EC2)
